TECNOTECH S.p.A. - Via E. De Nicola, 10 - MODENA
21 ottobre 2009
CTP074/2009

I risultati di misura riportati nel presente certificato sono stati ottenuti applicando le procedure elencate alla pagina opposta, dove sono specificati anche i campioni di prova fissati ed è stata la causa di incertezza di 0,0002% per il termometro di controllo. Esistono ulteriori incertezze di lettura, dovute al riconoscimento della cella di calibro e sono valutati dai riconoscimenti di misura, relativamente specificati.

Le misurazioni riportate nel presente certificato sono state eseguite con una incertezza complessiva di 0,0002% a scena espresso come incertezza di lettura, con un'incertezza di riconoscimento del termometro di controllo di circa il 10%. Tuttavia non basta il solo valore.

Le misurazioni riportate nel presente certificato sono state eseguite con una incertezza complessiva di 0,0002% a scena espresso come incertezza di lettura, con un'incertezza di riconoscimento del termometro di controllo di circa il 10%. Tuttavia non basta il solo valore.

Questo certificato può essere ripetuto in modo periodico, nella stessa condizione esistente da parte del Centro.

Non si riconosce esplicitamente la prioritaria proprietà di libera esclusività.

ELECTRONIC COLUMN LOAD CELLS

Load cells are high quality instruments used to measure force; the mechanics of the column type load cell make it suitable for use under compression and it is therefore ideal for checking weights or, as a dynamometer, calibrating testing machines that work in compression.

The heart of the device is a special, treated, stainless steel column on which eight electric STRAIN GAUGES are located in specific positions.

Any load applied causes the elastic deformation of the column and strain gauges which, in turn, causes a modification of the electrical voltage in the circuit which can be read and converted into engineering units by means of an appropriate electronic unit.

Tecnotest's range of cells comprises models with full scales from 1 kN to 5000 kN.

The initial calibration is performed by our metrologic laboratory (AS series) or by an Independent Laboratory (AP series), authorised to certify such kind of cells.

NOTE: SIT (Italian accredited laboratory verification) certificate available only on request.

N.B. On request, the same cells are available with different accuracy classes:

EN 0.5 up to 100 kN - EN 1 from 300 to 1000 kN

MODELS AVAILABLE:

AP SERIES	AS SERIES	
AP 037/001	AS 037/001	1 kN LOAD CELL - EN 1 - ø mm 63 x 94 (h) - 0.800 kg
AP 037/003	AS 037/003	3 kN LOAD CELL - EN 1 - ø mm 63 x 94 (h) - 0.800 kg
AP 037/005	AS 037/005	5 kN LOAD CELL - EN 1 - ø mm 57 x 117 (h) - 2.1 kg
AP 037/010	AS 037/010	10 kN LOAD CELL - EN 1 - ø mm 57 x 117 (h) - 2.1 kg
AP 037/025	AS 037/025	25 kN LOAD CELL - EN 1 - ø mm 57 x 117 (h) - 2.1 kg
AP 038/005	AS 038/005	50 kN LOAD CELL - EN 1 - ø mm 82 x 149 (h) - 5.2 kg
AP 038/007	AS 038/007	75 kN LOAD CELL - EN 1 - ø mm 82 x 148 (h) - 5.2 kg
AP 038/01	AS 038/01	100 kN LOAD CELL - EN 1 - ø mm 82 x 148 (h) - 5.2 kg
AP 038/03	AS 038/03	300 kN LOAD CELL - EN 2 - ø mm 135 x 200 (h) - 14 kg
AP 038/06	AS 038/06	600 kN LOAD CELL - EN 2 - ø mm 135 x 200 (h) - 15 kg
AP 038/1	AS 038/1	1000 kN LOAD CELL - EN 2 - ø mm 135 x 200 (h) - 16 kg
AP 038/2	AS 038/2	2000 kN LOAD CELL - EN 2 - ø mm 135 x 200 (h) - 19 kg
AP 038/3	AS 038/3	3000 kN LOAD CELL - EN 2 - ø mm 135 x 200 (h) - 21 kg
AP 038/5	AS 038/5	5000 kN LOAD CELL - EN 2 - ø mm 180 x 200 (h) - 36 kg

Every load cell having capacity up to 100 kN is supplied complete with ball seating device for use in compression.

5.4.1 LOAD CELLS**TECNOTECH**

UNIVERSAL DIGITAL READOUT UNIT FOR DYNAMOMETERS AND LOAD CELLS

Designed for use in the most advanced and highly accurate static and dynamic measuring systems, such as those used in Metrology Laboratories, material testing equipment, test or inspection benches, etc.

It is highly recommended that it be periodically certified by an authorised body in combination with dynamometers, load cells (having 4 or 6 wires) or unamplified pressure transducers.

Input comprises a chain formed by a highly-accurate analog circuit having long-term stability, as well as a frequency generator used for supplying power to 6-wire dynamometers and an A/D converter with a resolution of $\pm 500,000$ divisions.

In order to work at a highly-stable resolution of $\pm 200,000$ divisions (at 2 mV/V), the readout unit has an internal reference (with guaranteed variation of 1 ppm/ $^{\circ}$ C) which may be periodically checked by means of self-calibration function. User interface is guided by an LCD graphic display lit from the back (240 x 64 resolution) and by 5 function keys allowing full channel programming.

MODEL	AP 045	AP 048
Input signal Connectable load cells	*2 mV/V (standard) 1 (350 o 700 Ω , 4/6 wires)

Models:**TWO CHANNEL READOUT UNIT AP 045**

The units may be individually programmed and calibrated by the user.

This version may also be equipped with an optional RS232C, 24-column printer interface and remote print input.

AP 045/1 Serial interface RS-232C for AP 045 readout unit

TEN CHANNEL READOUT UNIT AP 048

All 10 channels may be individually programmed and calibrated by the user using point calibration (5 known points) or polynomial calibration (1st, 2nd or 3rd degree) as per official certificates issued by the competent authorities.

Calibration using these systems enables the dynamometer and readout unit to be linearized, thus eliminating any uncertainty in final measurement.

RS232C, a 24-column printer interfaces and remote print input are provided as standard.

METROLOGICAL LOAD CELLS (BIDIRECTIONAL) FOR U.T.M. CALIBRATION

Used in calibration operations as reference cell:
bidirectional for U.T.M. (compression/tensile) and complete with
the ball-seating for compression purposes.
Tensile grips are not included and must therefore be ordered apart.
Supplied with a calibration Certificate issued by an independent
Laboratory authorized to the certifications.
On request, a SIT certification according to: ISO 376
(class 1) - EN 10.002-3 (class 1) ASTM E74 (class A) can be
supplied.
Stainless steel made. Electric lead 5 m.

Accuracy class: 1 (EN 10002 - 3 and ISO 376)

LINEARITY - HYSTERESIS: $\leq \pm 0.02\%$ f.s.

RELATIVE ERROR (on reading):

- repeatability (0° - 120° - 240°): $\leq \pm 0.080\%$

- interpolation (2° equation): $\leq \pm 0.050\%$

- zero: $\leq \pm 0.010\%$ - reversibility: $\leq \pm 0.90\%$

EFFECT OF A TEMPERATURE OF 10°C :

- on zero: $\leq \pm 0.015\%$ - on sensitivity: $\leq \pm 0.010\%$

NOMINAL SENSITIVITY: 2mV/Volt

SENSITIVITY TOLERANCE: $\leq \pm 0.1\%$

RECOMMENDED SUPPLY VOLTAGE: 10 V (max. 18 V)

MECHANICAL LIMIT VALUES (NOMINAL LOAD)

- service load: 120% F.S.

- max permissible load: 150% F.S.

- failure load: > 300% F.S.

- max permissible dynamic load: 75% F.S.

NOMINAL TEMPERATURE RANGE: $-10/+40^\circ\text{C}$

PROTECTION GRADE (EN 60529): IP67

DIMENSIONS: diameter 230 x 250 (h) mm.

WEIGHT: 36 kg.

METROLOGICAL LOAD CELL 750 kN CAPACITY

AP 031/CT	tension
-----------	---------

AP 031/CB	compression/tension
-----------	---------------------

The load cells AP 031 and AP 033 need to be coupled with a signal processor adequate to the required accuracy class. A microprocessor-controlled amplifier for obtaining the best results (resolution 200,000 digits) is suggested.

The picture shows, the model AP 048. Its carrier frequency is 440 Hz (preferable to the usual a.c. power).

Many important functions are provided and the remote control via RS 232 interface is a standard device.

AP 048

Our two and ten channel universal signal readout units for 2-10 channels (AP 045 and AP 048) are illustrated on page 394

5.4.1 LOAD CELLS

TECNOTECH

COMPRESSION FRAME STABILITY VERIFICATION SYSTEM (FOOTE METER TEST)

EN 12390-4

European Standard EN 12390-4 appendix A prescribes that compression testing machines comply with requirements for stability test (commonly known as the Foote Meter test), more specifically:

- accuracy of force indication
- self-alignment of the upper machine platen
- alignment of the component parts of the machine
- restraint on movement of the upper platen

The system comprises:

**STRAIN LOAD CELL WITH 4 STRAIN
GAUGES 3000 KN CAPACITY**

AP 300

The strain load cell is fitted with four strain gauge bridges (4 outputs) for verifying behaviour during loading, with a fifth strain gauge (5th output) for verifying force accuracy (for use as a load cell during normal calibration tests).

Complete with 5 cables and relevant connectors.

DIMENSIONS: 220 x 130 x 200 (h) mm.

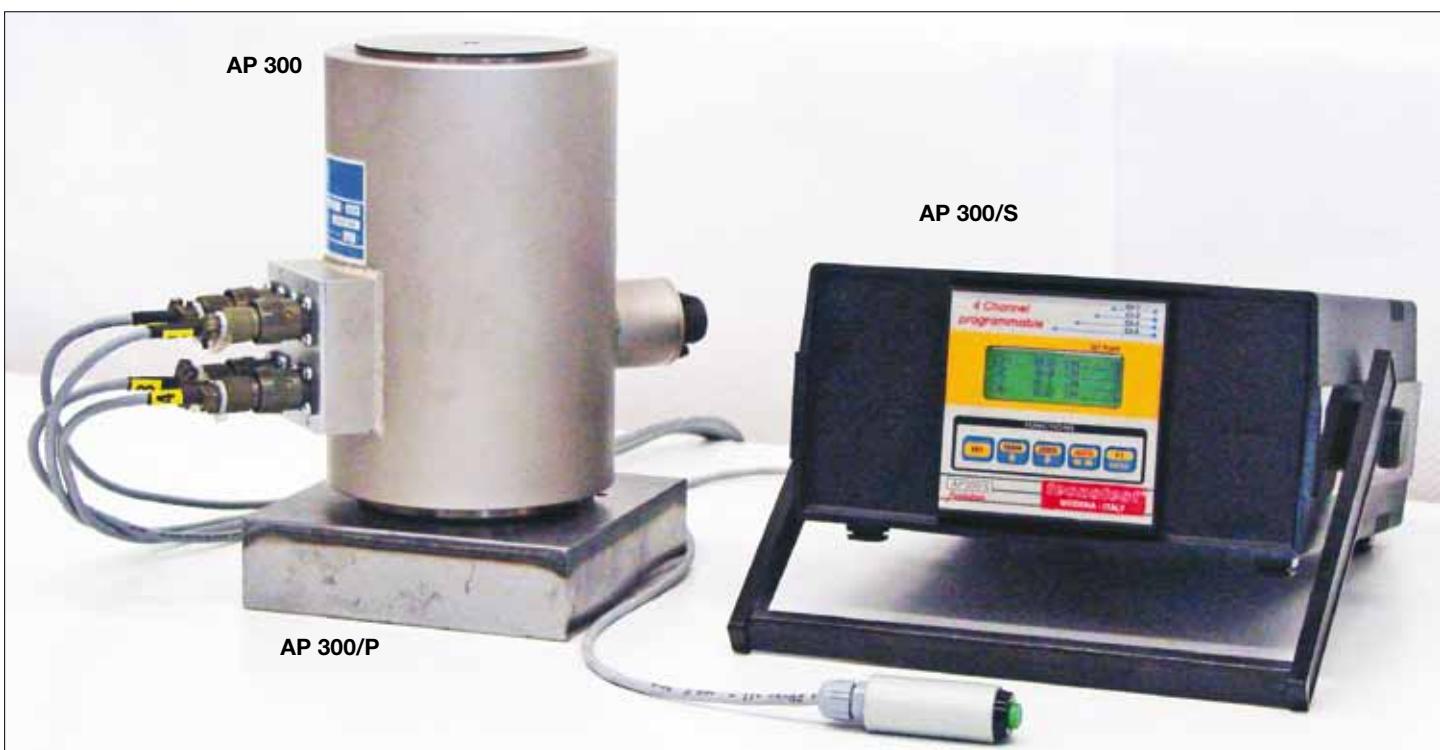

WEIGHT: 17 kg.

POSITIONING/TESTING PLATEN (FOR AP 300) AP 300/P

Made of special, rectified steel, it allows positioning and centring of the load cell (strain gauged load cell) on the lower auxiliary platen with 6 mm offset, as prescribed by the Standard.

DIMENSIONS: 150 x 150 x 40 (h) mm.

WEIGHT: 7 kg.

**DIGITAL, 4 CHANNEL STRAIN
INDICATOR FOR AP 300**
AP 300/S

Connected to a load cell (strain gauged load cell AP 300) allows simultaneous readout of 4 channels while verifying behaviour of the compression testing machine during loading phase.

Fitted with serial port RS 232C for transmission of data to a PC.

DIMENSIONS: 255 x 270 x 120 (h) mm.

WEIGHT: 3 kg.
